

FLIR SC325

Speed up your design cycle with infrared

The SC325 is designed from the ground-up to deliver the accurate thermographic imaging and repeatable temperature measurement necessary in demanding science and R&D applications. Each crisp thermal image is built from over 76,000 individual picture elements that are sampled by the camera's on-board electronics and firmware. SC325 features include:

Key features and Benefits:

- **Uncooled Microbolometer Detector** – Maintenance-free and provides excellent long wave imaging performance
- **Optics and Focus** – standard built-in 25° lens with optional 6°, 15°, 45°, and 90° lenses available to achieve other fields of view; manual and auto focus standard
- **Microscopy and Close-up Measurement** – Optional 100 μm , 50 μm , and 25 μm microscope optics and microscope stand are available for small target imaging and measurement
- **Precise Timing and Control** – Optically-isolated digital I/O connections eliminate communication latencies with digital in and out for shutter disable and program control along with a V-sync connector for triggering and synchronization
- **Plug-and-Play Compatibility** – Ideal system integration solution with universal plug and play and GigE Vision Control protocols. The camera can be fully configured from the PC, allowing command, control, and collection of full frame data from the camera in real time.
- **Versatility** – Compact, rugged, and lightweight with straightforward 3-sided mounting feature that permits quick installation and easy movement for new application requirements
- **Fast Data Transfer** – Equipped with an RJ-45 gigabit Ethernet connection that supplies a 16-bit 320 x 240 images at rates as high as 60 Hz along with linear temperature data; GenICam and GigE Vision Compliant
- **Tailored to Your Application** – FLIR Systems offers a complete line of accessories including optics, enclosures, data systems, and software tools to suit the most demanding applications.

320 x 240 pixels IR resolution and thermal sensitivity of 50mK provides optimized image details and temperature difference information.

Infrared measurement allows you to see a thermal problem and measure temperature over surfaces accurately.

Typical applications:

The FLIR SC325 camera is an excellent choice for those who want to work in R&D and need high frame rates but for whom 320 x 240 pixels resolution is sufficient. For those who need to use camera in R&D, it is highly recommended to use the FLIR ResearchIR software.
